

# PHENIX MUON IDENTIFIER MECHANICS

Ken Read

Oak Ridge National Laboratory University of Tennessee

for the PHENIX Collaboration

29 April 1998

Muon Arms VTC

• Changes since last muon meeting

#### • Factory Status

- BNL
- Japan

## • Schedule

### • Costs

- Gas choice: 9% Isobutane :  $25\% CO_2$  as baseline
- 25% Isobutane : 75%  $CO_2$  not yet precluded by any actions

97/04/11 10.23

97/04/11 14.51

- 3 large panels complete
- 1 empty panel INSTALLED
- 4 large panel assembly tables
- QA-conditioning area
- Manpower:
  - -6 BNL techs
  - -1 BNL supervisor tech
  - -1 machinist
  - -2 sheet metal workers
  - -1 welder
  - -7 physicists (2 from CIAE, 2 from RIKEN, 3 from ORNL)
  - -15 undergrads

## BNL Factory Status

- To construct 20 small panels and ship to BNL
- 5 panels already in transit!
- Last panels arrive at beginning of September 1998

- Need to install 2 large and 1 small panel per week on average beginning in May.
- Last panel must be installed before September 30, 1998.

- Total required AEE cost (including past spending) \$2.88 M plus 10% contingency.
- Discussions underway with RIKEN concerning appropriate cost sharing. (Large panels are twice as large and there are twice as many of them.)
